

## Environmental protection in Tallinn

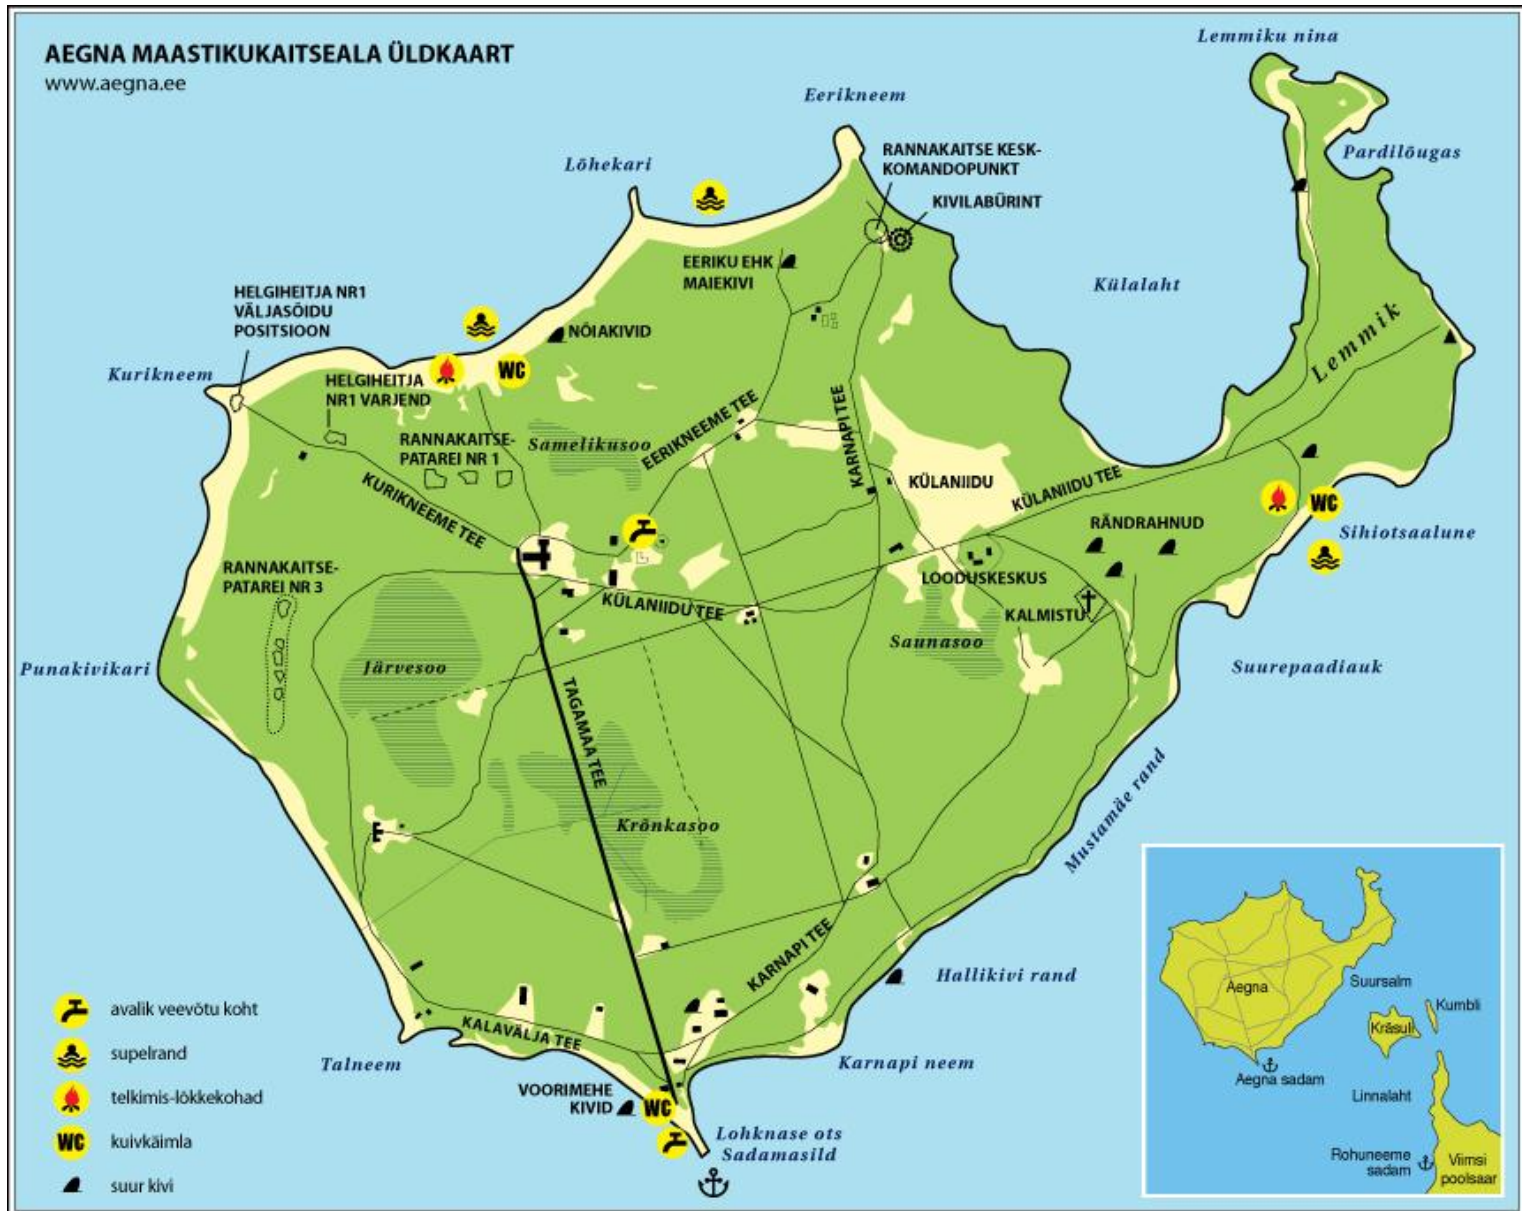

Tallinn has a lot on the ground, under the ground and under the water ...  
Place of a ship wreck “Tver”

# Green capital

# Aegna – island in the center of town

## Winter on Aegna

Ginkgo – over 110 years old and the thickest and tallest ginkgo in the  
Estonia

# Group of erratic boulders in the one of the largest living districts

# **Our tools in the environmental protection:**

Legislation of the local government:

- Tallinn Property Maintenance Rules
- Tallinn Waste Management Rules
- Tallinn Digging Rules
- Rules for Keeping Dogs and Cats

And State Laws:

- Nature Conservation Law
- Law on Waste Management

Protection of nature objects – some taken actions might destroy landscape.

This ski jump tower has been built outside of the protected area and on the sandy ground, so now as a result the tower is slowly destroying sandy landscape.

## Illegal tree cutting

Thoses stones have to protect coastside from water and wind, but somebody thought differently – who cares about others, I want to make my home nice!  
... or just not knowing the law...

## Our main problems:

- Waste, lack of waste management and lack of knowing the law
- Damaging of trees and green areas
- Empty houses

New type of waste or waste management?

Is there a waste problem in your cities?

What could be the main solution – changing people's thinking?

Your experiences?

Snow is melting and and what left is ... ?!?

Nice?

I made it, call me and punish....

Pokus or the grass mounds are protected in the Pirita landscape area

## Bird's hotel in middle of the living district

Thank you and welcome to Tallinn!
